Designing the Database

🛒 System 1: 🛒 Grocery Shopping List Tracker

Scenario:

Users want to create and manage personal grocery lists.

Entities:

- User
- Shopping List
- Item

Key Concepts:

- One user → many shopping lists
- Each list → many items
- Item may have quantity, unit, category (fruit, dairy)

🎵 System 2: 🎵 Favorite Songs Playlist

Scenario:

Track your favorite songs and playlists.

Entities:

- User
- Song (title, artist, genre)
- Playlist
- Playlist_Song (many-to-many relationship)

Key Concepts:

- Users create multiple playlists
- Each playlist contains multiple songs

📓 System 3: 📓 Daily Journal App

Scenario:

Users write journal entries each day.

Entities:

- User
- Entry (title, content, date, mood)

Key Concepts:

- Simple user-entry relationship
- Optionally tag entries with mood (happy, sad, stressed, etc.)
